

ONWASA has scheduled smoke testing for the sewer lines in Holly Ridge beginning Monday, February 18th through Friday, February 22nd between the hours of 8:00 AM and 4:00 PM each day. The purpose of this smoke testing is to locate any breaks or defects in the wastewater collections system, so they can be addressed and fixed properly.

This area includes Jenkins St, Hines St, Dyson St, Green St, Cole St, Main St, Burns St, Crawford St, Kraft St, Sound Rd, Hwy17, Sanders St, Pine St, Furneys Aly, Camp Davis Rd, Holly St, Flag St Lloyd St, Kenney St, Jones St, Pine St and Maple St.

ONWASA recommends customers in the areas of smoke testing run water in every bath and sink drain for at least 1 minute on each morning the smoke testing will take place. This will ensure the drain traps are full so that no smoke will enter the home. If smoke exits through the roof vent, everything is working properly.

The Smoke is:

NON-TOXIC, NON-STAINING HAS A SLIGHT ODOR, WHITE
TO GRAY IN COLOR AND CREATES NO FIRE HAZARD.
You Do Not have to be on site during testing!

It will be normal to see smoke coming from rooftop vent stacks, manholes or sewer openings. If you see smoke in your home from this testing, you will need to contact a plumber as that will be an indication of a sewer line leak in your home. ONWASA personnel will be on-site in the areas of smoke testing to address any concerns.

For more information on Smoke Testing, call 910-455-0722.
